

PBS4 (DPBS with 4% Serum)
(Greg A. Perry, Ph.D.)

Equipment:

500ml bottle

Reagents:

480 ml DPBS (Dulbecco's Phosphate Buffered Saline)
20 ml Calf serum **or** Fetal calf serum (Heat Inactivated)
2.5 ml 20% Sodium Azide (aqueous solution)

Method:

- 1) Combine and mix well.

Note: I usually use calf serum (CS) as it is MUCH less expensive than FCS and works just fine.
